Re: **Recycled Steel Information**

Dear Jed:

The following is an update on recycled steel and how it pertains to Leeds credits and our product.

O'Neal Flat Rolled Metals purchases steel from a variety of steel mills and depending on the type of steel mill, the percentage of recycled steel content will vary. There are two basic mills that we purchase our steel from: Electric Arc Furnace mills (commonly known as "mini mills") and integrated mills. The mini-mills use approximately 70% recycled steel in their production and the integrated mills use approximately 20% to 30% recycled steel. For both types of steel production, the average recycled steel content is approximately 80 to 90 percent post-consumer with the balance being pre-consumer product.

LEEDS requirements for section 4.1 (10% recycled) and 4.2 (20% recycled) will be covered with either type of steel supplied due to the sum of the post-consumer steel and pre-consumer content.

Please advise if you have any questions.

Sincerely,

Rob Donnellon
